

PaySpot selects Transaction Network Services for managed communications

Reston, Va. – 3 August, 2007 – Transaction Network Services, Inc. (NYSE: TNS), a global communications and network services provider, has been selected by PaySpot, Inc. to provide a managed communication solution for both dial-up and IP connectivity. PaySpot, a leading prepaid electronic payments processor, will add TNS to its list of network partners and use TNS' high performance network to transport transactions in a secure and cost-effective manner directly from its customers.

Under the agreement, PaySpot's customers will use TNS' FusionPoint and FusionPoint Express IP solution which provides a secure path between the merchant and the host processor via the Internet, using industry-standard IPSEC.

Tom Cregan, President at PaySpot, comments, "Using TNS' FusionPoint and FusionPoint Express solutions will allow our customers to use a secure, fully managed network for sending transactions. TNS alone will be transporting nearly half a million transactions a month so it was imperative, not only for ourselves but also for our merchants, that PaySpot choose a partner and network we could rely on to handle critical data."

"We are delighted that PaySpot elected to outsource its communication needs to TNS," adds Kent Phillips, SVP and general manager of TNS' POS division. "Working with TNS enables PaySpot to receive IP transactions from customers who are already using the FusionPoint solution. As FusionPoint enables merchants to transport all applications through one broadband pipe, connectivity is simplified, and both PaySpot and its customers can benefit from the reduced costs and time reductions."

###

About PaySpot

PaySpot, a Euronet Worldwide subsidiary (Nasdaq: EEFT), is one of the leading prepaid processors in the U.S. Launched in 2002. PaySpot offers a comprehensive array of prepaid products, including prepaid wireless, prepaid long distance, prepaid gift cards, prepaid debit cards, bill payment, money transfer, merchant processing, check guarantee, age verification and prepaid handsets. About TNS

Transaction Network Services (TNS) is an international communications company that enables payments, money and voices to move around the world.

TNS' mission is to enable the world to transact. It does this through a broad range of networking, communications and value added services, which it provides to many of the world's leading retailers, banks/processors, telecommunications companies and financial markets.

Since its inception in 1990, TNS has designed and implemented multiple data networks, each designed specifically for the transport of transaction-oriented data. TNS' networks support a variety of widely accepted communications protocols and are designed to be scalable and accessible by multiple methods. Today, TNS has 32 offices across 29 countries with the ability to provide services in other countries.
