TNS BOOSTS GLOBAL NETWORK WITH ENHANCED EXCHANGE ROSTER

26 July 2007 - Financial connectivity provider Transaction Network Services, Inc. (NYSE: TNS) has unveiled a newly enhanced suite of exchanges, available via its Secure Trading Extranet.

TNS' portfolio now includes access to more than 20 traditional and electronic exchanges spanning four continents, helping to break down barriers to global trading. This includes connections with exchanges in countries such as the United States, Canada, United Kingdom, Poland, Greece, Singapore and Thailand.

Alex Walker, senior vice president, TNS' Financial Services Division sales worldwide, said: "Fast, secure and reliable connections with exchanges are the backbone of modern electronic trading and can help financial institutions achieve a commanding position.

"We have leveraged our extensive experience and technological proficiency delivering mission critical connectivity to provide market participants with a reliable far-reaching network. One fully-managed connection supports links with multiple trading partners in a low latency environment.

"Boosting the number of exchanges on our network makes TNS' Secure Trading Extranet, in effect, an easy access gateway to the global marketplace. This brings organisations closer and solves many traders' connectivity headaches, by making the flow of trades, market data and messages more efficient. It is easily scalable, providing the infrastructure necessary to succeed on a global level."

TNS' Secure Trading Extranet connects over 1,000 financial community end-points, representing more than 550 buy and sell-side institutions, market data and software vendors, exchanges and alternative trading venues. It boasts 96 points of presence and provides services to customers in 29 countries across America, Europe and the Asia Pacific region, with its reach extending to many more countries.

Mr Walker said: "We will be continuing to develop and add to our network, to ensure it is the place to be for exchanges and a vital connectivity tool which no trader can afford to be without."

Financial institutions using TNS' network can exchange a variety of trade-related messages, including indications of interest, order routing and trade executions, as well as receiving consolidated and real time market data.

About Transaction Network Services

Transaction Network Services (TNS) is an international communications company that enables payments, money and voices to move around the world.

TNS' mission is to enable the world to transact. It does this through a broad range of networking, communications and value added services, which it provides to many of the world's leading retailers, banks/processors, telecommunications companies and financial markets.

Since its inception in 1990, TNS has designed and implemented multiple data networks, each designed specifically for the transport of transaction-oriented data. TNS' networks support a variety of widely accepted communications protocols and are designed to be scalable and accessible by multiple methods. Today, TNS has 32 offices across 29 countries with the ability to provide services in other countries.
