

NEW SECURE TRADING HUB STREAMLINES FIX CONNECTIVITY

The Financial Information eXchange (FIX) protocol is widely used and underpins the majority of the world's financial markets, however, its use is not as straightforward as many might think. This infographic looks at the challenges FIX trading presents and reviews the new TNS Secure Trading Hub from Transaction Network Services, which can eliminate the burden of setting up and managing multiple FIX connections.

What challenges does FIX trading present?

Need to maintain multiple trading connections

Achieving speed to market

Managing costs

Acquiring FIX expertise and knowledge

Maintaining security

Supporting multiple FIX message formats

What is the TNS Secure Trading Hub?

A fully managed, resilient, scalable and vendor agnostic FIX connectivity solution

Supports multi-asset classes and order routing services

Relied on to provide mission critical connectivity where speed, security and resilience are paramount

Who could benefit from the solution?

TNS' Secure Trading Hub makes FIX connectivity easier

In many instances new connections can be established within 24 hours

Incremental FIX sessions can be established for a marginal additional fee

Leverage TNS' expertise knowledge, skills, contacts and systems

Features an optional network encryption service

Strict physical entry and access control lists

Supports multiple FIX formats

Provides FIX message translation
